

# SQL Database Administrator

## Position Description

The SQL Database Administrator (DBA) will work closely with our organization's business managers, business users, application developers, and network team to model, design, and monitor database systems (currently MS SQL Server). The SQL DBA role will be responsible for establishing database business rules, maintaining documentation of data and reporting protocols, and assisting in the development and implementation of best practices for the management of databases including the assurance of database policies and procedures, data integrity, data extraction, report customization, and analysis.

**Title** SQL Database Administrator **Location** Bangalore, India

## Company

Liventus offers a complete array of consulting and development services nationwide, including custom software development, eCommerce, mobile technology solutions, and more to fit businesses' and corporations' needs while exceeding expectations.

Liventus accepts resumes on a daily basis for full-time or internship positions within the company.

## Job Responsibilities

- Develop standards and guidelines for use and acquisition of software and to protect vulnerable information
- Analyze and modify existing databases and database management systems or direct programmers and analysts to make changes
- Test programs or databases, correct errors, and make necessary modifications
- Analyze current and implement new security protocols for database access & permissions for applications and users alike, in addition to maintaining detailed security changelogs
- Approve, schedule, plan, and supervise the installation, maintenance, backups and testing of new products and improvements to database systems
- Create documentation and train developers and users with best practices
- Monitor database systems, create baselines & alerts, and proactively fix issues to ensure production database systems work seamlessly
- Develop data model describing data elements and how they are used, following procedures, and using pen, template, or computer software
- Develop methods for integrating different products so they work properly together, such as customizing commercial databases to fit specific needs
- Review project requests describing database user needs to estimate time and cost required to accomplish project
- Review procedures in database management system manuals for making changes to database
- Work as part of a project team to coordinate database development and determine project scope and limitations
- Identify and evaluate industry trends in database systems to serve as a source of information and advice for upper management
- Revise company definition of data as defined in data dictionary
